❖ **Introduction:**

Entertainer Data Analysis is a project about to analyse data of entertainers. Theme can be any of the choice. Data is divided into three form Basic Info, Breakthrough Info and Final Info. User can add additional data according to their choice and make meaningful data.

❖ **Scope:**

User can make an informative, beautiful and attractive dashboard showing charts and also can make a web application using machine learning based on the additional data they added

❖ **Architecture:**

- **Power Query:**

Power Query is the data transformation and mash up the engine. It enables you to discover, connect, combine, and refine data sources to meet your analysis need. It can be downloaded as an add-in for Excel or can be used as part of the Power BI Desktop.

- **Power Pivot:**

Power Pivot is a data modeling technique that lets you create data models, establish relationships, and create calculations. It uses Data Analysis Expression (DAX) language to model simple and complex data.

- **Power View:**

Power View is a technology that is available in Excel, Sharepoint, SQL Server, and Power BI. It lets you create interactive charts, graphs, maps, and other visuals that bring your data to life. It can connect to data sources and filter data for each data visualization element or the entire report.

- **Power Map:**

Microsoft's Power Map for Excel and Power BI is a 3-D data visualization tool that lets you map your data and plot more than a million rows of data visually on Bing maps in 3-D format from an Excel table or Data Model in Excel. Power Map works with Bing maps to get the best visualization based on latitude, longitude, or country, state, city, and street address information.

- **Power BI Desktop:**

Power BI Desktop is a development tool for Power Query, Power Pivot, and Power View. With Power BI Desktop, you have everything under the same solution, and it is easier to develop BI and data analysis experience.

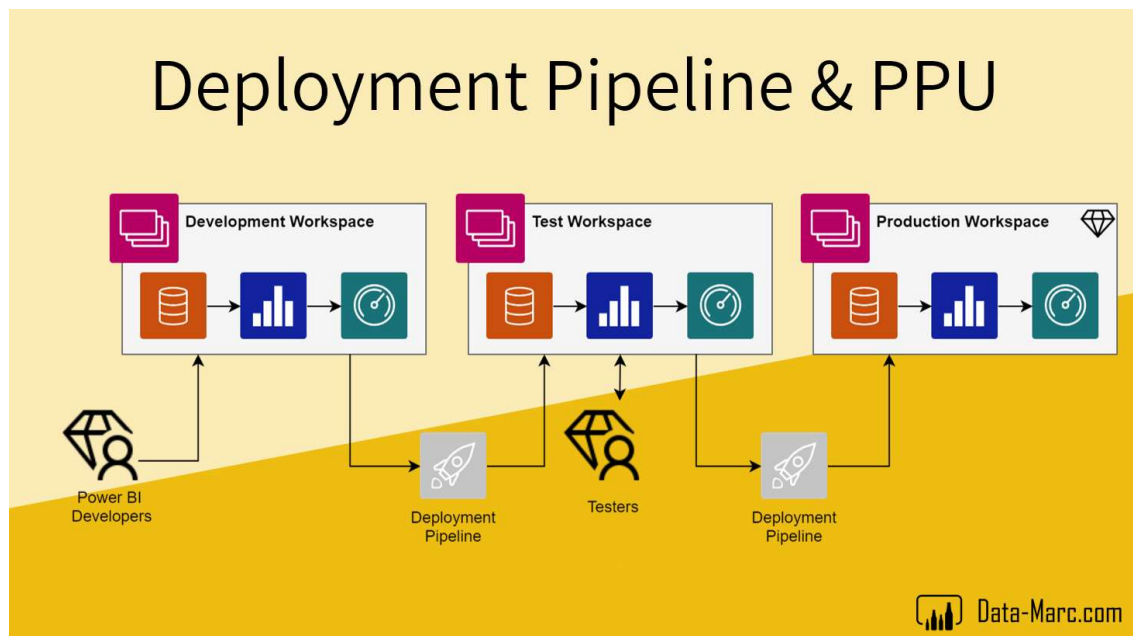

- **Power BI Service:**

Power BI service is the Software as a Service (SaaS) part of Power BI. It is also known as Power BI Online. To access Power BI Service, you need to log in to Power BI service.

- **Power Q&A:**

The Q&A feature in Power BI lets you explore your data in your own words. It is the fastest way to get an answer from your data using natural language. An example could be what was the total sales last year? Once you've built your data model and deployed that into the Power BI website, then you can ask questions and get answers quickly.

❖ **Deployment:**

- There are multiple ways to deploy the dashboard in Power BI. The simplest way is to publish directly on Power BI Services server from online mode. One can easily publish the work from the desktop and then it will open in browser, then user has to sign in and the work will be published.
- This work can see all the viewers around the world. You can share it via a sharable link.
- Thus, user can deploy a dashboard using Power BI Services
